

E-Commerce Sales Dashboard | Power BI Project Report

Project Overview

This project presents an interactive E-Commerce Sales Dashboard developed using Power BI to analyze sales performance, profit trends, shipping costs, and market-wise business insights. The dashboard enables data-driven decision making through dynamic visualizations and KPI analysis.

Dashboard Preview

Key Performance Indicators

Metric	Value
Total Sales	12.64M
Total Profit	1.47M
Total Quantity	178K
Shipping Cost	1.35M

Dashboard Features

Interactive filters for Category and Market analysis
Sales analysis by Country and State
Category-wise sales comparison
Market distribution visualization
Shipping mode performance analysis
KPI cards for quick business overview

Technologies Used

Power BI DAX Power Query Data Visualization Business Intelligence Data Analytics

Business Insights

Technology category generated the highest sales. Standard Class shipping mode had the maximum contribution. United States contributed the highest sales among countries. APAC and EU markets showed strong overall performance.

Conclusion

The project successfully demonstrates how business intelligence dashboards can be used to monitor performance, identify trends, and support strategic decision making through interactive and visually engaging analytics.
